

CueCube® Product Instructions

Cue Cube® Instructions:

Shaper Side

Apply short flicking upward strokes while slowly turning cue. This provides precise tip shaping with an automatic radius, giving the player ultimate ball control.

Scuffer Side

Apply back and forth strokes across the cue tip (similar to chalking). This fluffs the tip to hold chalk better and prevent miscues.

Shaft Slicker® Instructions:

1. Hold Shaft Slicker in palm of hand with nylon (rough) side up.
2. With pad in this position place shaft against nylon and make a fist tight enough to hold shaft.
3. Grip cue with free hand and slide Shaft Slicker back and forth, turning occasionally so entire stroke portion of shaft comes in contact with nylon.
4. Check smoothness of shaft occasionally by stroking it through bridge fingers as if you were playing.
5. When shaft is smooth, turn pad over and repeat process with leather side.
6. You will then have an ultra-smooth shaft, which will improve your stroke.

WARNING: Shaft Slicker is designed for wood cues only. **DO NOT** use on butt section of cue, damage to finish could result.
